

Investor Roadshow

CHARGING THE FUTURE

September 2016

Important Notice and Disclaimer

Representations

No person is authorised to give any information or to make any representation in connection with lithium Power International Limited (LPI or Company) or the offer which is not contained in this presentation. Any information or representation not so contained may not be relied on as having been authorised by the Company.

Not a disclosure document

The provision of this presentation does not require a disclosure document to be lodged with ASIC under Part 6D of the Corporations Act. Nor does the provision of this presentation require a product disclosure statement or similar document required under Chapter 7 of the Corporations Act. No formal disclosure document (within the meaning of the Corporations Act) has been or will be lodged with ASIC in connection with this presentation.

Accordingly, this presentation does not contain the information that would be contained in a prospectus or other disclosure document prepared under the Corporations Act and does not purport to contain all the information that may be necessary or desirable to enable a potential investor to properly evaluate and consider an investment in the Company.

Presentation is not Advice

The provision of this presentation is not and should not be taken as a recommendation in relation to an investment in the Company or that an investment in the Company is a suitable investment for the recipient of this presentation.

This presentation does not purport to constitute any advice whatsoever, but to the extent it does, it constitutes only general advice (within the meaning of section 766B(4) of the Corporations Act) and does not take into account your individual investment objectives, financial situation or particular needs. It does not contain personal advice. The Company recommends prospective investors seek independent financial and taxation advice before making a decision as to whether or not to apply for shares.

Competent Person's Statement

The information contained in this ASX release relating to Mineral Resources has been compiled by Mr Murray Brooker. Mr Brooker is a Geologist and Hydrogeologist and is a Member of the Australian Institute of Geoscientists and has sufficient relevant experience to qualify as a competent person as defined in the 2012 edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. He is also a "Qualified Person" as defined by Canadian Securities Administrators' National Instrument 43-101. Murray Brooker consents to the inclusion in this announcement of this information in the form and context in which it appears. The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcement. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.

Not an Offer in certain jurisdictions

The provision of this presentation may not be distributed nor may shares be offered for sale in the United States of America or any country in which it would be unlawful to do so.

Reference to Resource Estimate

The reader is referred to the previous announcement by LPI on the 28 July 2016, which provided details of the Maricunga project resource and information regarding what is considered by ASX as a production target. With regards to the resource, LPI confirms that it is not in possession of any new information or data relating to the resource (which is considered by ASX to be a foreign estimate), that materially impacts on the reliability of the estimate or the mining entity's ability to verify the foreign estimate as mineral resources in accordance with Appendix 5A (JORC Code). LPI confirms that all the material assumptions underpinning the production target provided in that announcement continue to apply. LPI confirms that the supporting information provided in the announcement by LPI on the 28 July 2016 continues to apply and has not materially changed. LPI cautions the foreign estimate (NI43-101) was not reported in accordance with the JORC code. This work was completed three years before the JV was announced on 20/07/1. A competent person has not done sufficient work to classify the foreign estimate as mineral resources or ore reserves in accordance with the JORC Code. It is uncertain that following evaluation and/or further exploration work that the foreign estimate will be able to be reported as mineral resources or ore reserves in accordance with the JORC Code. The resource refers to lithium carbonate equivalent (LCE), this is a conversion factor of 5.32x lithium metal. Future reporting will be under the JORC code.

Prospective investor to conduct own investigation and analysis

Prospective investors should carry out their own independent investigations and analysis of the Company and the information referred to in this presentation and other matters that may be relevant to it in considering whether to acquire the shares. Each prospective investor considering an investment in the shares must make, and will be taken to have made, its own independent investigation and analysis of the information provided in this presentation. Independent expert advice (including from a prospective investor's accountant, lawyer or other professional adviser) should be sought before making a decision to invest in the Company.

No responsibility for contents of Presentation

To the maximum extent permitted by law, no representation, warranty or undertaking, express or implied, is made and, to the maximum extent permitted by law, no responsibility or liability is accepted by the Company and its advisers or any of their officers, employees, agents or advisers or any other person as to the adequacy, accuracy, completeness or reasonableness of the information contained in this presentation. To the maximum extent permitted by law, no responsibility for any errors or omissions whether arising out of negligence or otherwise is accepted.

Projections and forecasts may not be accurate

The provision of this presentation may contain forward looking statements, which are based on subjective estimates and assumptions and about circumstances and events that have not yet taken place. Such estimates and assumptions involve significant elements of subjective judgement and analysis, which may or may not be correct. Accordingly, no representations are made by the Company, its related parties, consultants or advisers as to the accuracy of such information and there can be no assurance that any projected result would be achieved.

No Contract

The provision of this presentation, including any update or supplement to it, does not and will not form part of any contract for the subscription for shares in the Company that may result from the review, investigation and/or analysis of the shares or the Company, by a prospective investor.

Lithium Power International – A Diversified Pure-Play Lithium Company

Key attributes for LPI

- Pure-play lithium explorer & developer, which is diversified by geography and deposit type (hard rock & brine).
- Exploration targets identified across our project regions in South America and Western Australia. All project areas are close to critical road, rail, and port infrastructure.
- An experienced Board with extensive mining and commercial experience, with highly-qualified technical experts in both Australian and South America.
- Strong lithium market fundamentals driven by worldwide battery demand.

Key points for Maricunga JV

- On 13th September, LPI announced that it had executed the JV agreement to develop the world class Maricunga lithium brine project, together with the current owners Minera Salar Blanco (MSB) and Minera Li (51%-controlled by MSB, and 49% Li3 Energy).
- Maricunga is regarded as the highest grade pre-production lithium project in Chile – with characteristics comparable to the world-leading Atacama deposit. Exploration drilling will commence later this month, aimed at expanding the existing resource base.
- Maricunga is located within the “Lithium Triangle” in northern Chile, close to road & port infrastructure, and within a known pro-mining province of Copiapo.

LITHIUM POWER INTERNATIONAL (LPI) WAS ESTABLISHED TO ACQUIRE HIGH-QUALITY LITHIUM TENEMENTS IN AUSTRALIA AND SOUTH AMERICA

THE COMPANY COMPLETED A SUCCESSFUL IPO ON ASX IN JUNE 2016, FOLLOWING A HEAVILY OVERSUBSCRIBED OFFER PERIOD

Lithium Power - Board and Technical Team

Mr Ricky P Fertig

Chairman

Founding director and senior executive with 30yrs of international commercial experience across property, healthcare, and mining services sectors.

Mr Murray Brooker

Group Technical & Exploration Adviser

Geologist specialising in lithium brine over the last 6yrs, with 25yrs total experience in mining and exploration. Most recently, he was the JORC Competent Person to Orocobre on their lithium brine project in Argentina.

Mr Martin C Holland

Chief Executive Officer

Founder and CEO with 11yrs management experience focused on the mining exploration sector. Previously CEO of gold explorer Stratum Metals from 2010 to 2014, which listed on ASX in 2011.

Mr Stuart Peterson

Exploration Manager – Hard Rock

Hard rock pegmatite geologist with spodumene lithium experience. Most recently, the Senior Geologist with Mineral Resources on their Mt Marion lithium project in Western Australia.

Dr Luis Ignacio Silva P

Director and Regional Manager Latin America

Mining geologist with 40yr experience in Sth America, including the last 10yrs as a lithium specialist. He has worked with Talison, Freeport, Amax, Barrick, Homestake, Rio Tinto, Shell-Billiton, Pegasus, CNC, and SERNAGEOMIM.

Mr Todd Axford

Independent Expert – Hard Rock

Completed the IER in regards to all the Australian hard rock tenements and applications. Senior geologist with 21yrs experience. Previously held exploration positions at: Stratum Metals, Australasian Resources, Mt Gibson Iron, and Cliffs Natural Resources.

Mr Andrew G Phillips

CFO and Company Secretary

Over 25yrs of commercial experience. Company Secretary (and previous CFO) for Sequoia Financial, and Independent Director of Longreach Oil and Southern Cross Exploration. Held previous senior management roles with Aristocrat, Allianz, and Hoya Lens.

Dr Mark King

Independent Expert - Brine

Completed the IER for LPI's brine tenements in Chile and Argentina. Expert in hydrogeology with technical advice provided on over 100 projects across the Americas.

A photograph of a Tesla Supercharger station. In the foreground, a white charging station with a red cable is visible. The word "TESLA" is printed in red on the top of the station. In the background, a dark blue Tesla Model S is parked, with its charging cable plugged into the rear. The scene is outdoors, with green foliage and a building in the background.

TESLA

Lithium Market & Outlook

Lithium is charging the future...

- Lithium-ion batteries are the preferred choice for portable energy storage given the combination of:
 - ✓ light weight
 - ✓ high energy density
 - ✓ slow self-discharge
 - ✓ low maintenance
 - ✓ low environmental risk

“Lithium is the new gasoline”

“Lithium is now considered a key, strategic energy metal...”

“...within 30 years, a majority of new cars made in the United States will be electric”

“Given the continued growth in Electric Vehicles, lithium carbonate prices are expected to increase over the forecast period...”

The key growth for lithium is car batteries, particularly in China

- According to CRU, total global lithium demand across all applications is forecast to grow at +8% pa (CAGR) over the next 5 years to 2020.
- Last year, 44% of global lithium consumption was for lithium-ion rechargeable batteries, with demand expected to grow at +13% pa in this segment over the next 5 years.
- Within battery demand, growth in electric & hybrid vehicle batteries is expected to grow at +23% pa over the next 5 years.
- The main driver of this EV/HEV/PHEV growth is China, which represents >50% of global battery production capacity.

Source: CRU

Lithium prices continue to rally, driven by strong demand

- A combination of strong demand and supply interruptions has resulted in the Chinese lithium price rallying from ~US\$5,000/t in mid 2015 (contract) to >US\$20,000/t currently (spot).

Source: CRU, GTIS, Asian Metal

The fundamentals for lithium are strong in the medium term...

- Based on CRU's forecasts, the supply/demand balance for lithium will continue to remain tight over the next 5 years.

Source: CRU

Our Lithium Projects

Lithium Power – Our Projects

- Lithium Power has four distinct projects - two lithium brine projects within the “Lithium Triangle”; and two spodumene hard rock projects in Western Australia.
- In summary:
 1. **Maricunga Salar JV** in northern Chile – a high-grade lithium brine resource, held in JV with Minera Salar Blanco (MSB) and Li3 Energy (Li3), with characteristics similar to the world-leading Atacama lithium deposit – located in the same region as SQM, ALB
 2. **Greenbushes** in southern Western Australia – two granted exploration tenements adjacent to the world’s largest hard-rock lithium spodumene mine owned by Talison / Tianqi – the project is 100% owned by LPI
 3. **Pilbara** in northern Western Australia – three pending exploration tenements, the largest of which is located at Pilgangoora, and adjacent to the lithium spodumene deposits discovered by PLS, AJM and DKO – the project is 100% owned by LPI
 4. **Centenario Salar** in northern Argentina – a collection of lithium brine exploration tenements within the central & northern section of the salar – in the same region as ORE, FMC and LAC - the project is 100% owned by LPI

Tenement Overview

Projects Summary

Region	Location	Size	Exploration	
			To Date	Next 6mths
Atacama III	Maricunga Salar	45km ²	NI 43-101 Resource	Drill + Pump Test
Pilbara	Pilgangoora-Houston Ck	75km ²	Magnetic Survey	MMI + RC Drilling
Pilbara	Strelley / Tabbatabba	128km ²	Field Recon	Magnetic Survey
Greenbushes	Balingup / Brockman Hwy	398km ²	Gravity Survey	Magnetic Survey + MMI
Puna Plateau	Centenario Salar	62km ²	Diamond Drilling	GeoChem + Drill

A wide-angle landscape photograph of the Maricunga Lithium Project. The foreground is filled with tall, golden-brown grasses. In the middle ground, a large, dark brown body of water (likely a lithium brine pond) stretches across the frame. A prominent, irregularly shaped white salt flat or island is visible in the center of the pond. The background features a range of brown, arid mountains under a clear, deep blue sky.

Maricunga Lithium Project

Lithium Brines in South America – Lowest On The Cost Curve

- While difficult to directly compare lithium brine vs hard-rock, we can make the following broad observations:
 - ✓ Brines are typically easier & cheaper to explore.
 - ✓ Brines are typically cheaper & quicker to develop to production (depending on permits).
 - ✓ Brines require less opex once in production, and see less cost volatility.
 - ✓ Brines can be purified onsite to >99% lithium, while hard-rock production is sold as beneficiated ore.
 - ✓ Brines have historically been preferred by battery manufacturers.
 - ✓ Brine operations are generally regarded as having less environmental impact over time.
- For the reasons above, South American lithium brines inhabit the bottom of the cost curve, as can be seen below:

Maricunga Lithium Brine JV – Project Overview

- The Maricunga Salar is located in northern Chile and sits within the “Lithium Triangle”, which contains the largest and highest quality lithium brine deposits in South America.
- Maricunga is regarded as the highest quality pre-production lithium brine project in Chile, with characteristics comparable to the world-leading Atacama lithium brine deposit operated by SQM and Abermarle (which sits at the bottom of the global lithium cost curve).
- The Maricunga project has a foreign resource estimate* (from 2012) of 574,000 tonnes of lithium carbonate equivalent, with a very high average grade* - lithium (1250mg/l) and potassium (8970mg/l).
- Maricunga is located in Region III of Atacama in northern Chile. It is approx 170km NE of the mining town of Copiapo. In terms of infrastructure access, Maricunga is directly adjacent to International Highway 31, which connects northern Chile and Argentina, and 250km from the Chilean coast.

Note: LPI cautions the foreign estimate (NI43-101) was not reported in accordance with the JORC code. This work was completed three years before the JV was announced on 20/07/16. A competent person has not done sufficient work to classify the foreign estimate as mineral resources or ore reserves in accordance with the JORC Code. It is uncertain that following evaluation and/or further exploration work that the foreign estimate will be able to be reported as mineral resources or ore reserves in accordance with the JORC Code.

* refer to LPI announcement on the 28 July 2016 and page 2 disclaimers

Maricunga – One of the highest quality lithium salars in South America

- Known foreign resource estimate* of 574,000 tonnes of lithium carbonate equivalent, based on previous exploration.
- An additional 1125 Ha of new tenements now under exploration.
- Second highest lithium grade* (1250mg/l) of the major salars in South America.
- Magnesium grade* below the Atacama deposit, with a similar Mg/Li ratio.
- High potash byproduct resulting in improved project economics.
- Close to critical road & port infrastructure.
- Recent study of 37 salars ranked Maricunga as #7 salar worldwide^.
- Chilean Geological Survey has classified Maricunga as a Category 1 deposit (one of only four in Chile).

	Salar de Maricunga¹	Salar de Atacama²	Salar de Centenario⁴	Salar Del Hombre Muerto²	Salar de Olaroz²	Salar de Cauchari³
Country	Chile	Chile	Argentina	Argentina	Argentina	Argentina
Owner	LPI/MSB/Li3	SQM/Albemarle	LPI/Eramet	FMC/Lithium One	Orocobre/Toyota	Orocobre/SQM/Lithium Americas
Lithium (g/l)	1.25	1.84	0.56	0.74	0.69	0.59

(1) NI 43-101 amended report prepared for Li3 Energy Inc. dated 23 May, 2012

(2) NI 43-101 report prepared for Orocobre Ltd. dated 13 May, 2011

(3) NI 43-101 report prepared for Lithium Americas Corp. dated 11 July, 2012

(4) S area – from Lacus preliminary resource estimate (which is outside of LPI tenements) dated Jan/Feb 2012

(5) Peter Ehren presentation at LSM Conference, dated 20–22 May, 2014

Note: LPI cautions the foreign estimate (NI43-101) was not reported in accordance with the JORC code. This work was completed three years before the JV was announced on 20/07/16. A competent person has not done sufficient work to classify the foreign estimate as mineral resources or ore reserves in accordance with the JORC Code. It is uncertain that following evaluation and/or further exploration work that the foreign estimate will be able to be reported as mineral resources or ore reserves in accordance with the JORC Code.

Maricunga Lithium Brine JV - Tenement Map

- The JV tenements consist of a collection of holdings in the northern (lithium-rich) section of the Maricunga salar:

Tenement	Code	Size	Vendor
San Fransisco	1932	425 Ha	LPI
Salamina	1932	150 Ha	LPI
Despreciada	1932	100 Ha	LPI
Cocina 19–27	1932	450 Ha	MSB/Li3
Litio 1–6	1982	1438 Ha	MSB/Li3
Blanco	n/a	1800 Ha	MSB/Li3
Camp1	n/a	100 Ha	MSB/Li3

- The Maricunga Salar has been subject to significant past exploration under the previous partners, MSB and Li3. More than US\$30m has been invested in these tenements over the past 4yrs, in order to generate the existing lithium resource.
- Pumping results from two test production wells (see P1 and P2 opposite) undertaken by MSB in 2015 indicated strong brine flow rate and high lithium grades.
- Under the new JV, the next phase of exploration will include the drilling of 16 diamond drill holes and 2 pumping wells across the salar, starting later this month. This drilling program is targeting an update of the existing lithium resource, with a new JORC report anticipated in 1H 2017.

Maricunga Lithium Brine JV – Development Timeline

Maricunga Lithium Brine JV – Structure

- LPI, MSB and Li3 have agreed the following ownership structure for the new JV entity in Chile (“NewCo”):

Lithium Power - 50.0%

Minera Salar Blanco - 32.3%

Li3 Energy - 17.7%

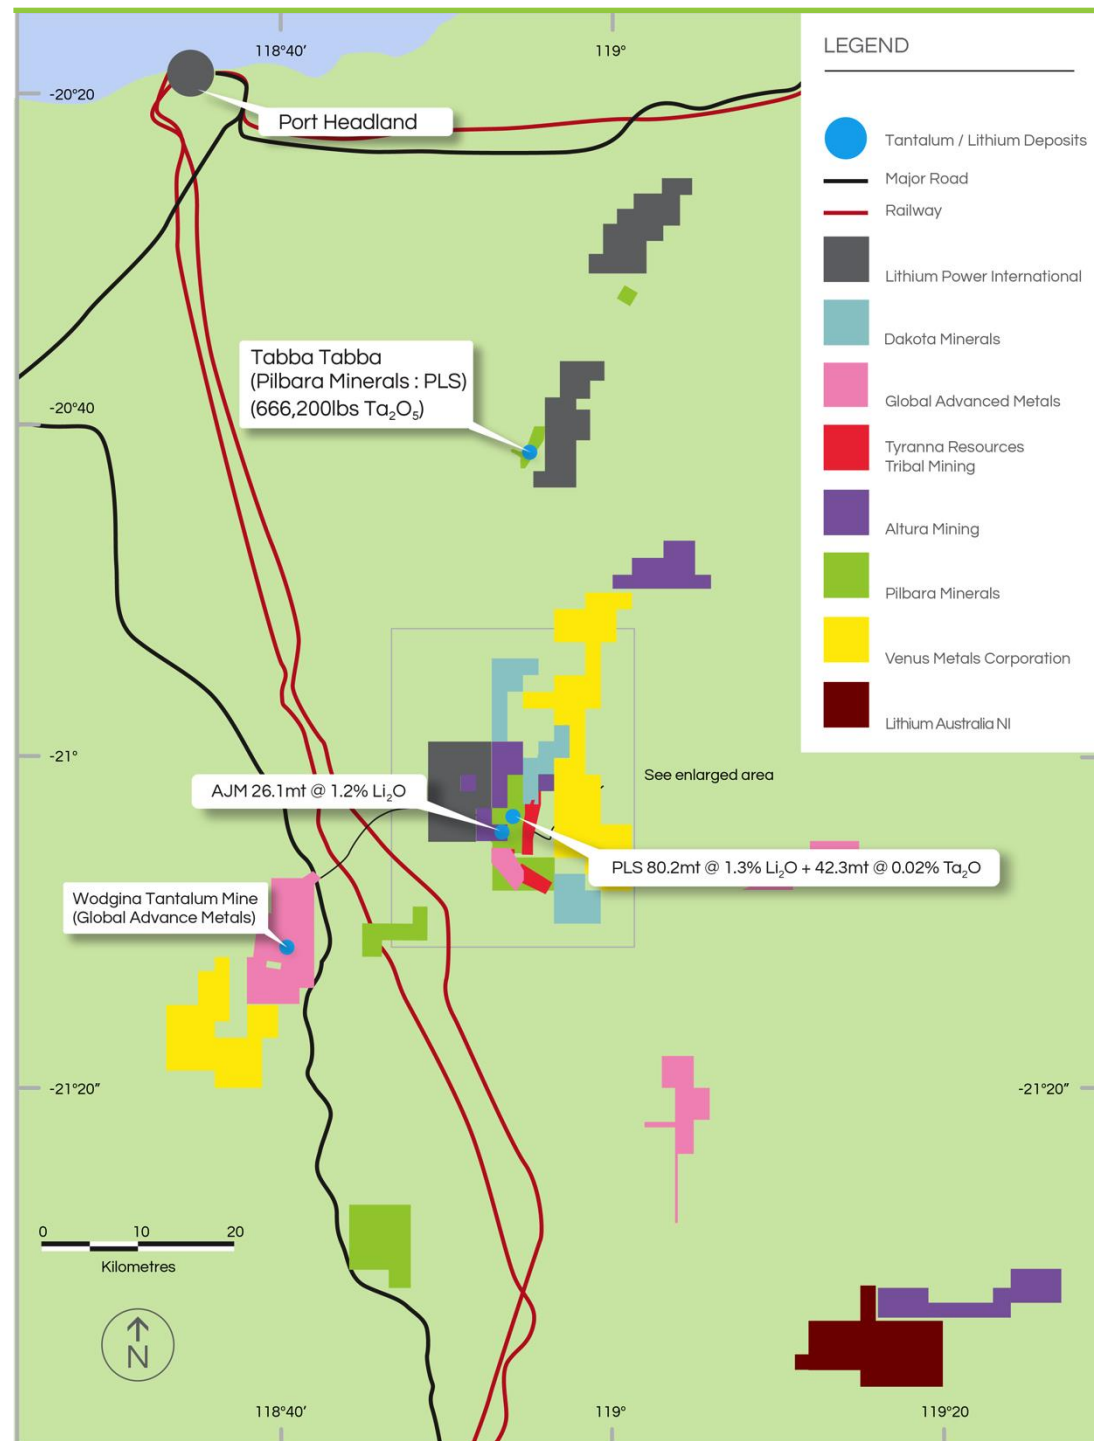

- NewCo has now been incorporated, with the Maricunga tenements and assets held by all three parties to be vended in shortly.
- LPI to fund exploration and development costs over the next 2.5yrs to earn its 50% equity interest in NewCo, with the target of completing a Definitive Feasibility Study by late 2018. LPI will hold 50% voting rights from the start of the JV.
- MSB to sell to LPI three options over the San Francisco, Salamina and Despreciada tenements in exchange for 16 million ordinary shares in LPI, voluntarily escrowed until 24 June 2018. The share issue will be subject to LPI shareholder approval.
- LPI to provide up to US\$3.5 million via a secured loan to NewCo in order to fast-track the initial exploration activities, funded from current cash on hand.
- The Board and Technical Committee for NewCo will be split between LPI, MSB and Li3 from the outset, based on each company’s respective shareholding in the Maricunga JV.

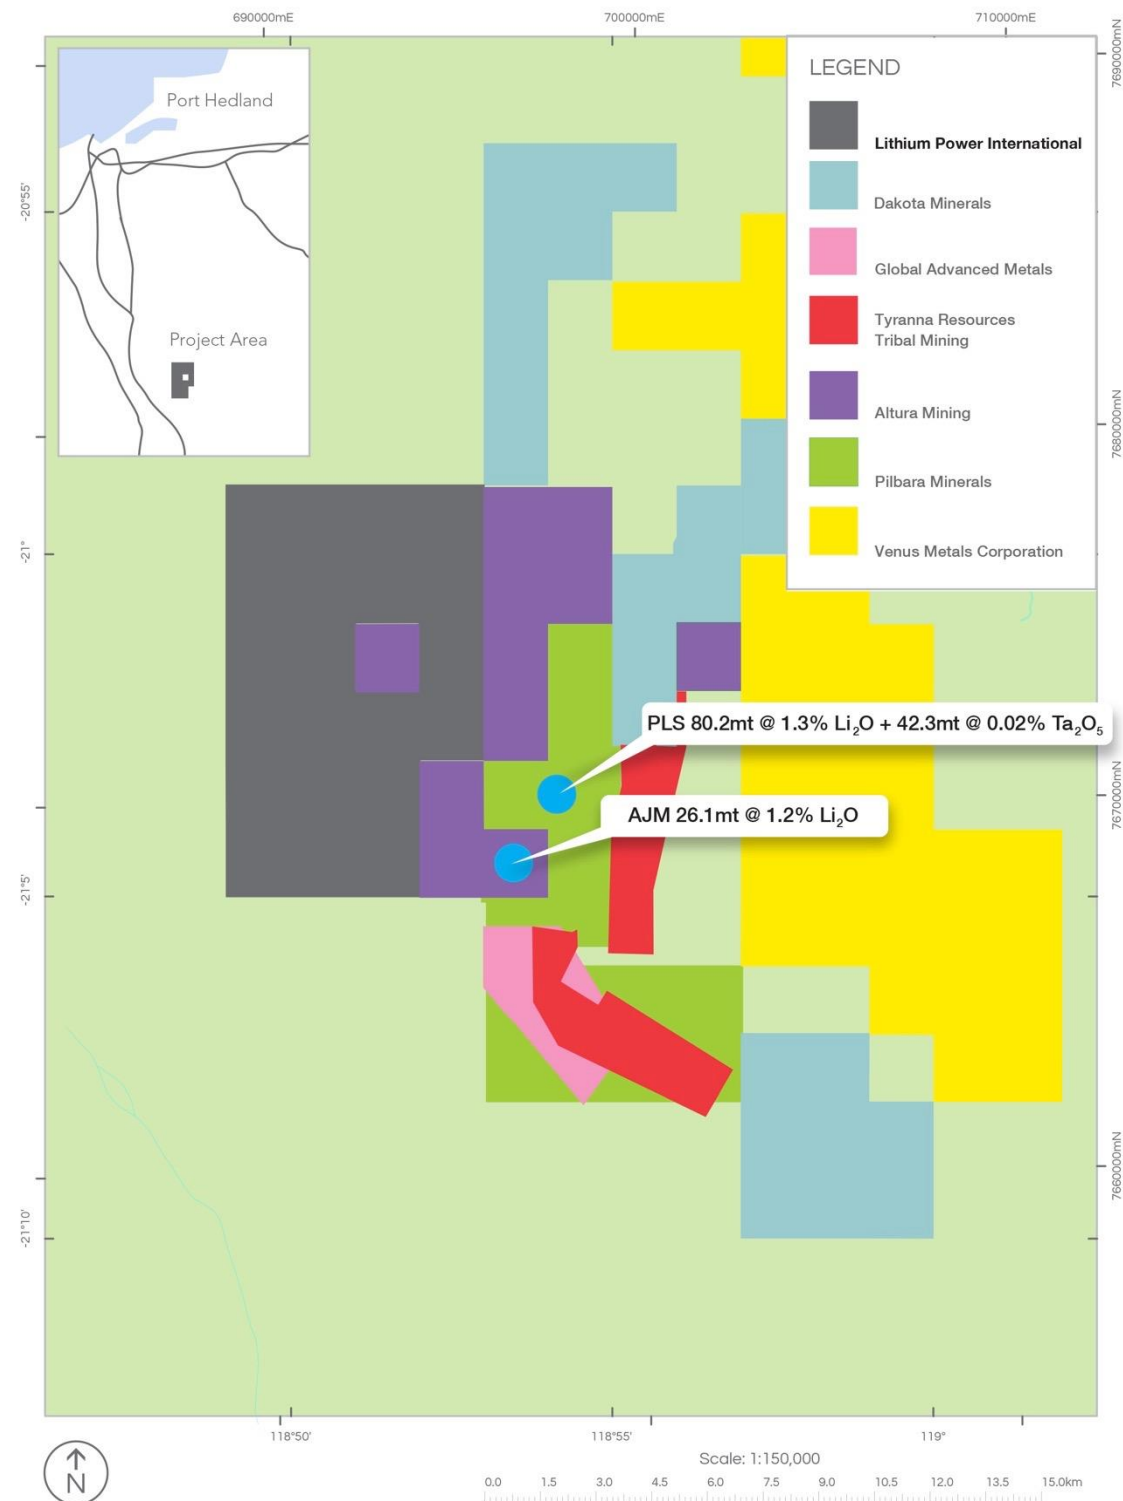

A wide-angle photograph of a dry, open landscape under a clear blue sky. The foreground is filled with low-lying, green, spiky vegetation growing in sandy soil. In the middle ground, there are several large, rounded, reddish-brown boulders scattered across the terrain. In the background, a large, prominent rock formation or hill rises, also composed of similar reddish-brown rocks. The overall scene depicts a natural, arid environment.

Pilgangoora Project

LPI's application is directly adjacent to the PLS and AJM's lithium deposits

LPI's application is directly adjacent to the PLS and AJM's lithium deposits

Pilgangoora — local geology and lithium mineralisation

- In January 2016, LPI completed an aeromagnetic survey across the Pilgangoora-Houston Creek application area.
- The shaded area in the image opposite highlights a region of interpreted greenstones extending north to south across the tenement.
- It is likely that any greenstone in this area would be part of the neighbouring greenstone belt hosting the Pilgangoora lithium pegmatite deposits, according to our IER.
- The estimated strike length of the greenstone area is 12km on our tenement. This will represent a high priority target area for further exploration.
- We are awaiting granting of this tenement in order to undertake the next stage of exploration. This will involve geochem and other techniques in order to identify drilling targets.

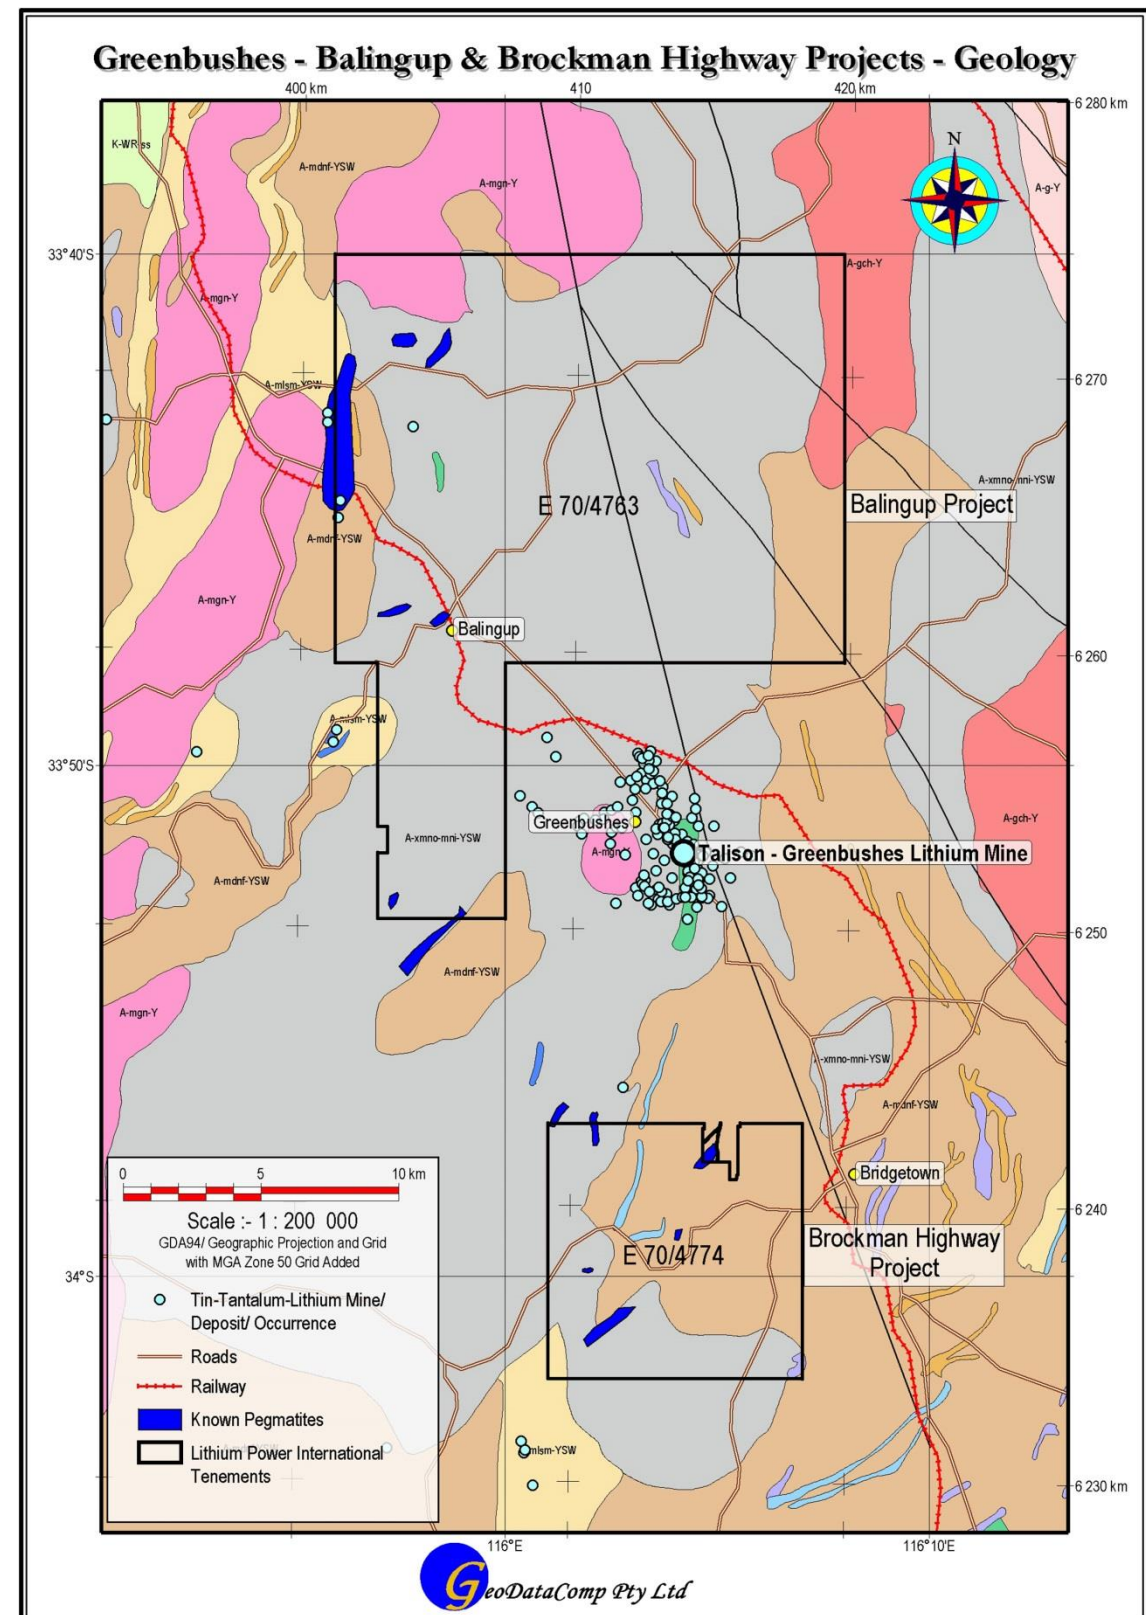

Greenbushes Project

LPI's granted tenements are adjacent to Talison's lithium mine at Greenbushes

- LPI's tenements include two separate project areas in the Greenbushes region:
 1. **Balingup Project** - a large tenement extending north and west of Talison's Greenbushes mine.
 2. **Brockman Highway Project** - a second tenement extending south of the Greenbushes mine, and divided by the Brockman Highway.
- Only 1.5% of LPI's project areas have been explored for lithium mineral occurrences, despite their close proximity to the Talison mine.
- The next steps in terms of exploration of the Greenbushes area includes an aeromagnetic survey across both tenements in order to identify potential drill targets.

LPI has identified a gravity feature similar to that of the Talison mine

- Open source gravity imagery shown below indicates two circular features in the Greenbushes area. One feature is coincident with the Talison mine, and the other is coincident with LPI's Brockman Highway project area.

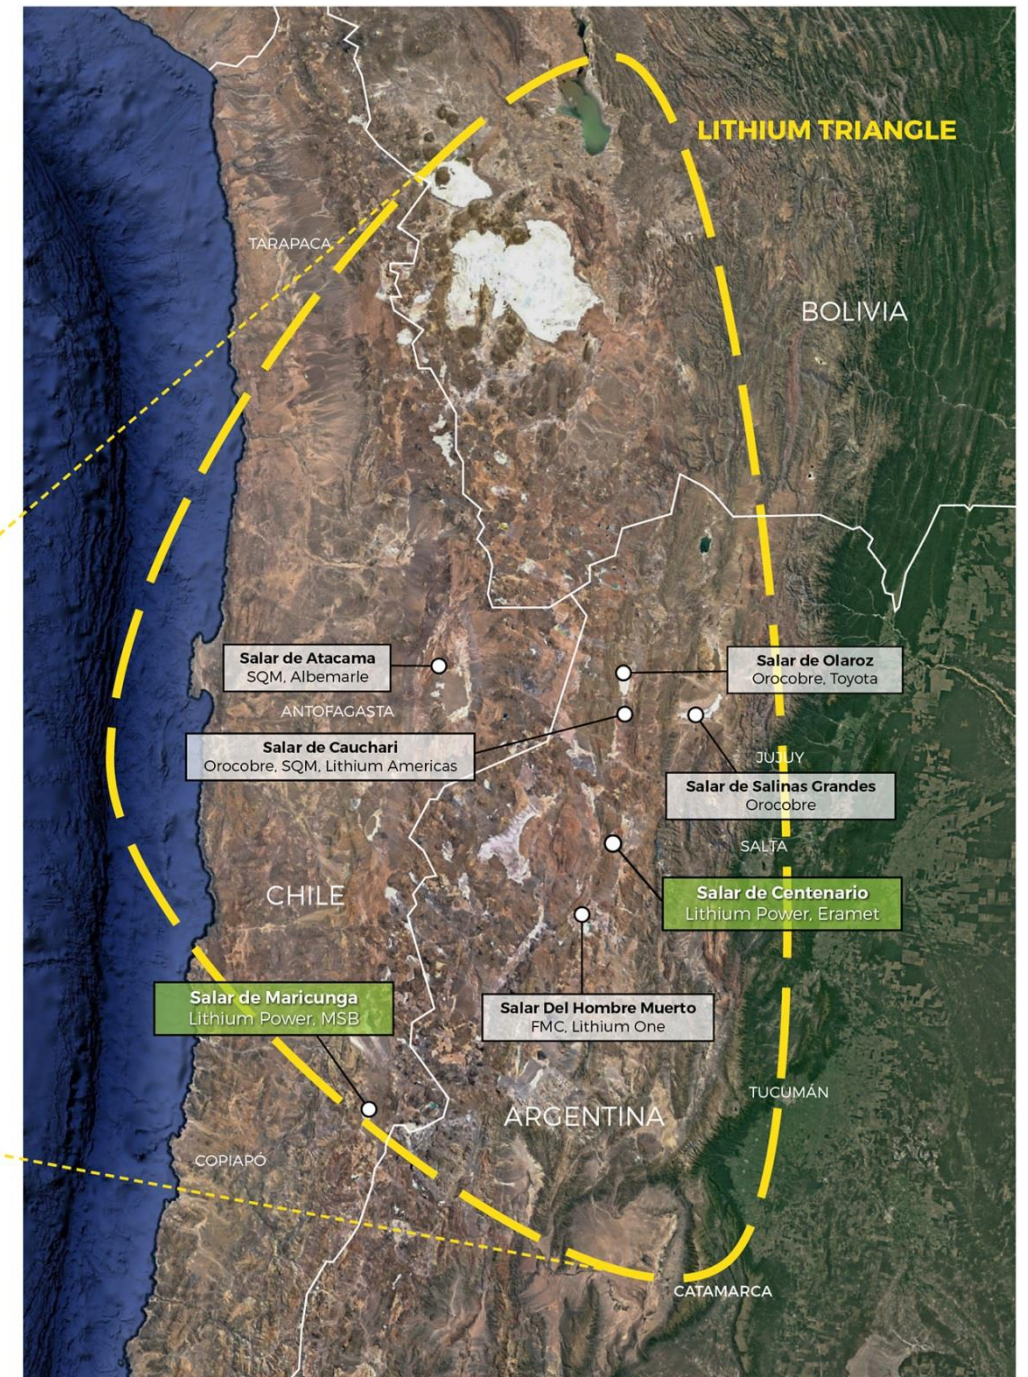

Centenario Project

LPI's salar is located in the Salta province on Argentina's Panu Plateau

- In February 2016, LPI entered into an agreement to acquire a number of properties within the Centenario salar in north west Argentina.
- On 29th August 2016, the Company announced that it had acquired an additional tenement in the salar, Centenario 3. In total, the 7 properties (6 granted and 1 in application) comprise a total area of approximately 70km².
- These properties are in the early stages of exploration, but have the potential to host economic concentrations of lithium in subsurface brine, according to our IER.
- The salar is in the same region as other lithium brine projects including:
Salar de Olaroz – Orocobre, Toyota
Salar de Cauchari – Orocobre, SQM, Lithium America
Salar de Salinas Grandes – Orocobre
Salar Del Hombre Muerto – FMC, Lithium One

LPI's salar is located in the Salta province on Argentina's Panu Plateau

- These properties are in the early stages of exploration, but have the potential to host economic concentrations of lithium in subsurface brine, according to our IER.
- In terms of future exploration, the first stage will entail geophysical surveys to identify viable drilling targets. This will be followed by a series of diamond holes, and pumping tests.
